MBA 651 - Fundamentals of International Project Management

The ability to successfully manage the complexities of International Project Management is quickly becoming one of the most important and sought after skill-set by today’s fast paced multinational corporations. This course focuses on preparation and management of complex projects in a global context.

This class lays a solid foundation on which a successful international project management career can be built. Student will be introduced not only to the key concepts in Project Management such as; work breakdown structure, critical path, PERT, Gantt, resource planning, and project budgeting but also to the latest software and communications tools that enable outsourcing and off-shoring to become an integral part of a successful international project management strategy.

Working in teams and using MS Project software, students will develop and manage a number of specifically selected projects that illustrate the real life international project management issues and challenges.

This practical hands-on experience will be invaluable for students who plan to pursue careers with multinational organizations.

Professor Bio
